

Learning Summary Report

My Details

Name: Ashar Kamal

Degree: Bachelors of Information and Technology

Company Name: Ontrack Data Analysis

Role title or area: Data requirement analyst

Target grade: Credit

Self-Assessment

Grade: Credit

In this assessment, we worked on documenting the creating a mock-up of the possible upgrades of the project. Using the Figma, visual paradigm and other visual drawing tools, we created what we aim to do in the next phases.

Course Learning Outcomes

1. Team work

Through this course, I want to learn the essence of team work. As this is an extensive group project, I am learning the art of team work. I have been engaged in communication with team members

2. Docker and modern web development

Through this course, I am trying to learn how modern web apps are developed. I have been introduced to docker, web development in teams and using containers.

3. Working with APIs

Previously in my educational career, I have been exposed to APIs. However, not so extensively. In this project, I am looking forward to use and create APIs.

4. Deploying web apps using Containers

In one of the courses before that, I have deployed the web app. However, in this course, I am looking forward to deploy the web app using the containers.

5. Inter-personal communication

Through frequent team meetings and engagement with team members, I am looking forward to hone my interpersonal communication skills.

Overview of Evidence Collected

For the evidence, we have Figma designs, class diagrams, and program workflow diagrams. Also, for the team work, we have team chats screenshots.

Reflections

If you had to pick a few things you have done to best represent what you have achieved in capstone so far, what would it be and why?

I have so far achieved the art of team work, the skills to design modern websites using the Angular and Modern.

What is the most important thing that you have learnt so far in the capstone program?

The user of Docker and APIs.

What were you able to achieve by the end of the trimester? How these helped you showcase your capabilities, and how these helped advance your company or one of the capstone cohorts?

By the end of this trimester, I was able to polish by inter-personal communication skills as well analytical skills along with the web development skills. These skills would be surely utilized in the company for the advancement of products. For instance, the On track cohort project would become better using the skillset achieved at the end of this project.

If you could go back and redo the start of the unit, is there anything you would do differently? How would changing this have helped improve things?

I would surely give more time to this course than what I gave now. The reason for that is I loved this course.

Explanation of Figma Design

Better Stats for better insights

The data generated by Ontrack has not been greatly used for the purpose of insight generation in order to improve grades of student by empowering them with insights about the grading. Therefore, in this regard an effort has been made. Following is the idea and its implementation:

Idea:

1. Students who often submit assessment well before the deadline get better grades as they have the time to receive the feedback from the tutor and improve the assessment in order to achieve a better grade.

Implementation:
